

Answers to Written Questions Received for Yellow River LUST Project 16BCRDFRBIGOER-0001

Q: Is the determination that no fieldwork is necessary for completion of the Site Monitoring Report based on an internal DNR evaluation conducted by UST staff?

A: Yes

Q: What type of formation are the monitoring wells drilled into (ie. soil or bedrock)?

A: The bidder should review the LUST file information which can be obtained by contacting the DNR Records Center. The file information will be made available at no cost to the bidder.

DNR Records Center
502 E. 9th Street
Des Moines, IA 50319-0034
Phone: (515) 725-8480 Fax: (515) 725-8202
Email: dnr.records@dnr.iowa.gov

Q: What are the depths of the monitoring wells?

A: The bidder should review the LUST file information which can be obtained by contacting the DNR Records Center. The file information will be made available at no cost to the bidder.

Q: The solicitation indicates all work to be completed by October 1, 2016. Can the DNR commit to timely reviews of the environmental covenant and SMR to allow ample time for the CGP to complete submittal of the SMR and complete well abandonments before the completion date?

A: Yes.

Q: Can you provide documentation of the water line replacement at this time? (Date of replacement, size, material, gaskets, site sketch)

A: Documentation was provided to bidder on 5/18/16. This information will be made available upon request.

Q: The site plan provided in the bid document indicates a Tap Water Sample collected from the Shop structure located north of the Lumber Storage Building. No water line is indicated servicing the building. Please clarify.

A: There is a hydrant or spigot outside the shop structure north of the lumber building. That must be where the sample was collected from that is in question.
